Title: Hand, Foot & Mouth Disease / Date: September 2014

Intro: With schools back in session, many parents are again on the alert for easily transmissible childhood diseases. Hand, foot and mouth disease is one of them. Usually, it's not a big concern but, in certain circumstances, hospitalization may be required. Here's Dennis Douda for the Mayo Clinic News Network.

Total running time [1:54]	
Dennis Douda speaking	It's not often that a rash will land a child in the
Dennis Douda speaking	hospital.
Jennifer Gumbel speaking	"It was just the skin. He was his normal,
	cheerful self
Dennis Douda speaking	But, when 7-month old Max Gumbel 's chronic
	eczema suddenly erupted over a 24 hour
	period, a call to the Nurse Help Line prompted
	his parents to take him to the emergency room.
/// SOT @ 1:59 :06	"And then this morning when he started
C.G. Jennifer Gumbel	getting it in his mouth, that was the
Max's Mother	clincher."
Dennis Douda speaking	Right there is the tell-tale blister in the
	middle of Max's tongue. The diagnosis,
	hand, foot and mouth disease, a common
	condition, usually appearing in children
	under five years old.
C.G. Dr. Megha Tollefson	"What happens is, kids'll get a fever.
Mayo Clinic Pediatric Dermatologist	They may not feel well and then, over
	the next few days, they'll get more
	symptoms."
Dennis Douda speaking	Max's Pediatric Dermatologist Megha

"One is, if there are so many sores in the mouth, they couldn't drink and they're getting dehydrated and they would need to be in the hospital for fluids basically." (trt 1:05) Interestingly, tests revealed that Max had contracted a newer, more aggressive strain
	herpes virus, which can create more serious complications. Dr. Tollefson says another situation may also require hospitalization. "One is, if there are so many sores in the mouth, they couldn't drink and they're getting dehydrated and they would need to be in the hospital for fluids basically." (trt 1:05) Interestingly, tests revealed that Max had

	widespread rash on the torso, arms and
	legs.
Jennifer Gumbel speaking	"Kind of the mystery to me was, he was
	getting it on his hands and in his diaper
	where he had never had eczema before."
Dennis Douda speaking	Considering the other possibilities,
	however, Jennifer says the diagnosis was
	actually a relief. Because it's a virus, Dr.
	Tollefson says, in most cases there's little
	to do beyond letting it run its course.
Dr. Megha Tollefson speaking	"So just trying to get kids to eat and
	drink as much as possible. If they have a
	fever, to give them medicines like
	Tylenol or ibuprofen to help with the
	fever. "
Dennis Douda speaking	For the Mayo Clinic News Network, I'm
	Dennis Douda.

Anchor tag: Dr. Tollefson says it's difficult to prevent most cases of hand, foot and mouth disease, because children may be contagious days before symptoms appear. As for that newer strain of the virus, Mayo dermatologists say don't be surprised to see older kids, and even adults, coming down with it.
